Summary

B.Tech Computer Science undergraduate (2027) focused on **application** and **offensive security** — web application penetration testing, vulnerability assessment, secure code review, and building secure software across the SDLC. Certified Associate Penetration Tester (CAPT); **CEH in progress**.

Technical Skills

Application Security: OWASP Top 10, Web Application Penetration Testing, Vulnerability Assessment, Secure Code Review, Threat Modeling, Authentication & Session Security, API Security

Security Tools: Burp Suite, OWASP ZAP, Nmap, Wireshark, Metasploit, Nessus, ffuf, Gobuster, Snort

Programming & Scripting: Python, Bash, C, C++, Go, JavaScript, TypeScript, SQL, Dart

Platforms & Tooling: Linux (Kali/Ubuntu), Docker, Git, CI/CD, REST APIs, Burp/ZAP proxies

Experience

Software Engineer, [Classplus](#) Jul 2025 – Feb 2026

- Implemented **secure authentication and session management** (token storage in platform Keychain/Keystore, refresh and secure-logout flows) for a production app published on Google Play and the App Store.
- Applied **OWASP Mobile Top 10 / MASVS** practices — input validation, secure encrypted local storage for offline-first data, and protection of sensitive data at rest and in transit (TLS, certificate-aware networking).
- Embedded security into CI/CD by integrating **dependency/vulnerability scanning** and crash/error monitoring (Firebase) into automated release pipelines (Fastlane, GitHub Actions), enabling auditable, repeatable releases.

Founding Mobile Engineer, [ReviewDale](#) Feb 2025 – Nov 2025

- Built the founding mobile application end-to-end with a **security-first approach**: hardened REST API integration, secure token handling, and least-privilege access to device APIs and permissions.
- Established secure build and release automation (GitHub Actions, Fastlane) with **secrets management** and signed builds, keeping credentials out of source control.

Security Projects

AuthSphere — Authentication Failure Analyzer [GitHub](#)

- Built a real-time analyzer to detect and monitor **authentication failures**, directly addressing OWASP **Identification & Authentication Failures**.
- Detected brute-force patterns, session anomalies, and invalid-login behavior; FastAPI backend with WebSocket-based live log monitoring and alerting.

Data Poisoning LLM — Adversarial ML Demo [GitHub](#)

- Built a platform demonstrating **data-poisoning attacks** on LLMs via weight manipulation, misinformation injection, and topic-based poisoning.
- Provided side-by-side clean vs. poisoned model comparison with poisoning-impact metrics to illustrate AI/ML supply-chain risk.

Certifications

Certified Social Engineering Defense Practitioner (CSEDP), The SecOps Group May 2026

Certified Associate Penetration Tester (CAPT), Hackviser Feb 2026

Certified Ethical Hacker (CEH), EC-Council In Progress

Pre Security, TryHackMe Nov 2025

The Bits and Bytes of Computer Networking, Google Dec 2024

Achievements & Leadership

- **CTF competitor:** cryptography (BB84 quantum key distribution, XOR known-plaintext attacks), web/recon (vhost fuzzing with ffuf and Gobuster), and SSH lateral movement.
- **Security hackathons:** built NitiRakshak, an agentic regulatory-compliance system (LangChain, FastAPI, PostgreSQL), at the SuRaksha Cyber Hackathon (Canara Bank).
- **Vice President, Cyber Warriors Club, VIT Bhopal** — led a 100+ member security society and ran awareness programs reaching 3000+ students.
- **Open-source contributor** — Hacktoberfest '24 & '25, GSSoC '24 (contributor and Extended-edition mentor), FOSS '25; contributions to AOSSIE and foss42.

Education

B.Tech in Computer Science & Engineering 2023 – 2027 (Expected)
VIT Bhopal University | CGPA: 8.77

- Relevant Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Database Management Systems, Computer Architecture, Software Engineering.
